

DUAL MODE RETORTS SATURATED STEAM AND WATER SPRAY

Positioned for the future of flexible packages

Canned shelf-stable products are still the standard. But new flexible and semi-rigid containers continue to gain popularity in an increasingly competitive marketplace. Our dual-mode retorts offer the choice of running cans in a saturated steam environment or running flexible and semi-rigid containers in a steam water spray environment with overpressure. These dual mode retorts are available configured for future retrofitting of water spray capability saving initial cost or water spray ready for immediate fragile container processing needs. Future-proofing has never been easier.

FEATURES AND BENEFITS

- Saturated steam cook and flooded cooling
- Overpressure water spray with direct steam injection heating and heat exchanger cooling
- Nine spray bars for quick and even water spray cooking and cooling
- Available with optional gentle motion agitation and rotary agitation
- Space saving fully automatic orbiting or swing-open door
- Ready for integration into Allpax ABRS
