HANDLING & STERILIZING

SUBSTRATE STERILIZER

Designed with features demanded mushroom and mycelium producers

Available in multiple sizes; Allpax substrate sterilizers feature the capability of providing a cooling step to the sterilization process. The forced cooling increases throughput so smaller vessels can provide the same output as vessels twice their size. Racking systems are designed to both the customer's container geometry and to the internal geometry of the vessel for maximum capacity. Dual doors allow the growing area to remain isolated from cross contamination.

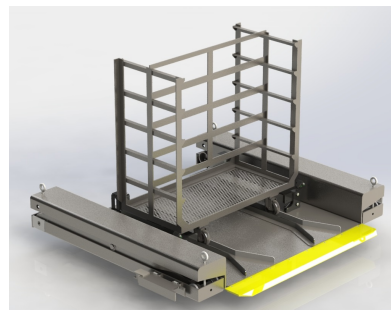

FEATURES & BENEFITS

- Stainless steel construction
- rated for 58 p.s.i. (4 Bar)
- Dual quick-opening doors
- Racks designed to maximize capacity
- Internal load/unload conveyor available
- Overpressure forced cooling
